Among Tibetan Texts E. Gene Smith, 2001-06-15 For three decades, E. Gene Smith ran the Library of Congress's Tibetan Text Publication Project of the United States Public Law 480 (PL480) - an effort to salvage and reprint the Tibetan literature that had been collected by the exile community or by members of the Bhotia communities of Sikkim, Bhutan, India, and Nepal. Smith wrote prefaces to these reprinted books to help clarify and contextualize the particular Tibetan texts: the prefaces served as rough orientations to a poorly understood body of foreign literature. Originally produced in print quantities of twenty, these prefaces quickly became legendary, and soon photocopied collections were handed from scholar to scholar, achieving an almost cult status. These essays are collected here for the first time. The impact of Smith's research on the academic study of Tibetan literature has been tremendous, both for his remarkable ability to synthesize diverse materials into coherent accounts of Tibetan literature, history, and religious thought, and for the exemplary critical scholarship he brought to this field.

Object-oriented Software Engineering Timothy Christian Lethbridge, Robert Laganière, 2004 This book covers the essential knowledge and skills needed by a student who is specializing in software engineering. Readers will learn principles of object orientation, software development, software modeling, software design, requirements analysis, and testing. The use of the Unified Modelling Language to develop software is taught in depth. Many concepts are illustrated using complete examples, with code written in Java.

NAKO Gabriela Krist, 2016-10-10 The Nako temple complex from the 12th century is an extraordinary testimony of early Tibetan Buddhism not anymore preserved in today's Tibet. Endangered by the rough environment, improper treatment and frequent earthquakes, the outstanding monuments were re-discovered by scholars from Austrian universities in the 1980s. The transdisciplinary research project carried out over more than 20 years led to in-depth studies, preservation and model-like conservation of the temples and their artworks.

Adolescence in Urban India Shagufa Kapadia, 2017-10-11 Set against the backdrop of social change and globalization, this book presents the contents and contours of adolescence in contemporary urban India. Based on the trends derived from a series of mixed-method studies with adolescent girls and boys, and parents from urban upper middle class families, it explores adolescents' and parents' interpretations of the stage of adolescence, illustrates views on parenting, and discusses approaches to interpersonal disagreements to derive a framework of the parent-adolescent relationship. Drawing from the cultural-contextual perspective of human development, the book in its essence offers a culturally and contextually sensitive model of adolescence that is shaped along the central tenets of family interdependence, harmony, and sensitivity to parental concerns. Highlighted as well are aspects that have remained mostly unexplored, for example, adolescents' capacity for empathy and perspective taking, and emerging issues of autonomy in a primarily relational culture. At a broader level, the book reflects upon the interplay of cultural continuity and change, and contributes to an understanding of globalizing influences on human development. Overall, the depiction of adolescent development captured in the book has significant implications for enhancing family relationships and fostering self-growth---elements that are crucial for positive youth development. The book will be of immense use to scholars in human development, psychology, and allied fields as well as to practitioners who work with adolescents.

Tibetan Literature Leonard van der Kuijp, James Burnell Robinson, Paul Harrison, 1996-01-01 Tibetan Literature addresses the immense variety of Tibet's literary heritage. An introductory essay by the editors attempts to assess the overall nature of 'literature' in Tibet and to understand some of the ways in which it may be analyzed into genres. The remainder of the book contains articles by nearly thirty scholars from America, Europe, and Asia—each of whom addresses an important genre of Tibetan literature. These articles are distributed among eight major rubrics: two on history and biography, six on canonical and quasi-canonical texts, four on philosophical literature, four on literature on the paths, four on ritual, four on literary arts, four on non-literary arts and sciences, and two on guidebooks and reference works.

Advances in Quantum Field Theory Sergey Ketov, 2012-02-03 Quantum Field Theory is now well recognized as a powerful tool not only in Particle Physics but also in Nuclear Physics, Condensed Matter Physics, Solid State Physics and even in Mathematics. In this book some current applications of Quantum Field Theory to those areas of modern physics and mathematics are collected, in order to offer a deeper understanding of known facts and unsolved problems.

Book Clubs and Book Commerce Corinna Norrick-Rühl, 2019-12-31 In the 20th century, cumulative millions of readers received books by mail from clubs like the Book-of-the-Month Club, the Book Society or Bertelsmann Club. This Element offers an introduction to book clubs as a distribution channel and cultural phenomenon, and shows that book clubs and book commerce are linked inextricably. It argues that a global perspective is necessary to understand the cultural and economic impact of book clubs in the 20th and into the 21st century. It also explores central reasons for book club membership,

condensing them into four succinct categories: convenience, community, concession and, most importantly, curation. This title is also available as Open Access on Cambridge Core.

Learning SAS by Example Ron Cody, 2018-07-03 Learn to program SAS by example! *Learning SAS by Example, A Programmer's Guide, Second Edition*, teaches SAS programming from very basic concepts to more advanced topics. Because most programmers prefer examples rather than reference-type syntax, this book uses short examples to explain each topic. The second edition has brought this classic book on SAS programming up to the latest SAS version, with new chapters that cover topics such as PROC SGPLOT and Perl regular expressions. This book belongs on the shelf (or e-book reader) of anyone who programs in SAS, from those with little programming experience who want to learn SAS to intermediate and even advanced SAS programmers who want to learn new techniques or identify new ways to accomplish existing tasks. In an instructive and conversational tone, author Ron Cody clearly explains each programming technique and then illustrates it with one or more real-life examples, followed by a detailed description of how the program works. The text is divided into four major sections: Getting Started, DATA Step Processing, Presenting and Summarizing Your Data, and Advanced Topics. Subjects addressed include Reading data from external sources Learning details of DATA step programming Subsetting and combining SAS data sets Understanding SAS functions and working with arrays Creating reports with PROC REPORT and PROC TABULATE Getting started with the SAS macro language Leveraging PROC SQL Generating high-quality graphics Using advanced features of user-defined formats and informats Restructuring SAS data sets Working with multiple observations per subject Getting started with Perl regular expressions You can test your knowledge and hone your skills by solving the problems at the end of each chapter.

The Great Perfection (rDzogs Chen) Samten Gyaltzen Karmay, 2007 *The Great Perfection (rDzogs chen in Tibetan)* is a philosophical and meditative teaching. Its inception is attributed to Vairocana, one of the first seven Tibetan Buddhist monks ordained at Samye in the eighth century A.D. The doctrine is regarded among Buddhists as the core of the teachings adhered to by the Nyingmapa school whilst similarly it is held to be the fundamental teaching among the Bonpos, the non-Buddhist school in Tibet. After a historical introduction to Tibetan Buddhism and the Bon, the author deals with the legends of Vairocana (Part I), analysing early documents containing essential elements of the doctrine and comparing them with the Ch'an tradition. He goes on to explore in detail the development of the doctrine in the tenth and eleventh centuries A.D. (Part II). The Tantric doctrines that play an important role are dealt with, as are the rDzogs chen theories in relation to the other major Buddhist doctrines. Different trends in the rDzogs chen tradition are described in Part III. The author has drawn his sources mainly from early unpublished documents which throw light on the origins and development, at the same time also

using a variety of sources which enabled him to explicate the crucial position which the doctrine occupies in Tibetan religions.

Computer-Aided Production Management Asbjorn Rolstadas,2012-12-06 The purpose of this book is to discuss the state of the art and future trends in the field of computerized production management systems. It is composed of a number of independent papers, each presented in a chapter. Some of the widely recognized experts in the field around the world have been asked to contribute. I owe each of them my sincere gratitude for their kind cooperation. I am also grateful to Peter Falster and Jim Browne for their kind support in helping me to review topics to be covered and to select the authors. This book is a result of the professional work done in the International Federation of Information Processing Technical Committee IFIP TC5 Computer Applications in Technology and especially in the Working Group WG5.7 Computer-Aided Production Management. This group was established in 1978 with the aim of promoting and encouraging the advancement of the field of computer systems for the production management of manufacturing, off shore, construction, electronic and similar and related industries. The scope of the work includes, but is not limited to, the following topics: 1) design and implementation of new production planning and control systems taking into account new technology and management philosophy; 2) CAPM in a CIM environment including interfaces to CAD and CAM; 3) project management and cost engineering; 4) knowledge engineering in CAPM; 5) CAPM for Flexible Manufacturing Systems (FMS) and Flexible Assembly Systems (FAS); 6) methods and concepts in CAPM; 7) economic and social implications of CAPM.

Tibetan Histories Dan Martin,1997 Over 700 items are featured in this bibliography which attempts to provide a comprehensive listing in chronological sequence of Tibetan-language works belonging to the typical historical genres that have evolved between the 11th century and the present. As well as dates and details of composition or publication, authorship and title, there are also references to the secondary literature in other languages.

The Life and Works of MKhan-po GZhan-dga' (1871-1927) Achim Bayer,2019

Operating System Concepts Abraham Silberschatz,Greg Gagne,Peter B. Galvin,2011-07-05 Operating System Concepts continues to provide a solid theoretical foundation for understanding operating systems. The 8th Edition Update includes more coverage of the most current topics in the rapidly changing fields of operating systems and networking, including open-source operating systems. The use of simulators and operating system emulators is incorporated to allow operating system operation demonstrations and full programming projects. The text also includes improved conceptual coverage and additional content to bridge the gap between concepts and actual implementations. New end-of-chapter problems, exercises, review questions, and programming exercises help to further reinforce important concepts, while WileyPLUS continues to motivate students and offer comprehensive support for the material in an interactive format.

Telephoning in English Audio Cassette Set (2 Cassettes) B. Jean Naterop,Rod Revell,1997-05-08 Telephoning in

English is for professionals or trainee professionals in business, commerce and administration who need to make and answer phone calls. It is suitable for learners at the intermediate and upper-intermediate levels, and can be used in class or for self-study. The emphasis is on developing and consolidating practical telephone skills in a variety of interesting and relevant contexts. Activities range from message-taking and spelling practice to role play, providing learners with a comprehensive course in using the telephone in English. Second edition This has been fully revised and updated to take into account the most important recent developments in the world of telecommunications. It has also been redesigned at a larger format and in colour to make it easier to use for learners working on their own. The recorded material is available on an audio cassette set (2) or audio CD set (2).

A Course in Universal Algebra S. Burris, H. P. Sankappanavar, 2011-10-21 Universal algebra has enjoyed a particularly explosive growth in the last twenty years, and a student entering the subject now will find a bewildering amount of material to digest. This text is not intended to be encyclopedic; rather, a few themes central to universal algebra have been developed sufficiently to bring the reader to the brink of current research. The choice of topics most certainly reflects the authors' interests. Chapter I contains a brief but substantial introduction to lattices, and to the close connection between complete lattices and closure operators. In particular, everything necessary for the subsequent study of congruence lattices is included. Chapter II develops the most general and fundamental notions of universal algebra—these include the results that apply to all types of algebras, such as the homomorphism and isomorphism theorems. Free algebras are discussed in great detail—we use them to derive the existence of simple algebras, the rules of equational logic, and the important Mal'cev conditions. We introduce the notion of classifying a variety by properties of (the lattices of) congruences on members of the variety. Also, the center of an algebra is defined and used to characterize modules (up to polynomial equivalence). In Chapter III we show how neatly two famous results—the refutation of Euler's conjecture on orthogonal Latin squares and Kleene's characterization of languages accepted by finite automata—can be presented using universal algebra. We predict that such applied universal algebra will become much more prominent.

Managing the Transition to a Low-Carbon Economy Bindu N. Lohani, Masahiro Kawai, Venkatachalam

Anbumozhi, 2016-03-08 Asia must be at the center of the global fight against climate change. It is the world's most populous region, with high economic growth, a rising share of global greenhouse gas emissions, and the most vulnerability to climate risks. Its current resource- and emission-intensive growth pattern is not sustainable. This study recognizes low-carbon green growth as an imperative—not an option—for developing Asia. Asia has already started to move toward low-carbon green growth. Many emerging economies have started to use sustainable development to bring competitiveness to their industries and to serve growing green technology markets. The aim of this study is to share the experiences of emerging Asian

economies and the lessons learned. The book assesses the low-carbon and green policies and practices taken by Asian countries, identifies gaps, and examines new opportunities for low-carbon green growth.
