Environmental Science for Grades 6-12 Jorge Valenzuela, James Fester, 2022-08-15 Apply high-quality project-based learning strategies to create lessons and units that help students solve a variety of urgent environmental problems. Environmental science (ES) education is essential to preparing today's students for the future. We must create opportunities for hands-on investigations that explore complex environmental problems in order to find solutions and meet the challenges of our changing world. Educators looking to bring ES-focused experiences to their students can turn to technology and social-emotional learning (SEL) strategies to connect students with real-world situations and citizen science opportunities, while fostering empathy and a love for the natural world. Project-based learning (PBL), with its emphasis on inquiry and authentic challenges, can be an effective approach to teaching ES. Those new to PBL may not feel they have adequate training. Likewise, teachers who haven't taught ES may question how to incorporate it into their curriculum. This book addresses both situations, providing practical guidance for teachers, along with examples of technology-rich, learner-centered student projects addressing timely topics such as sustainability, human impact and climate change. This book:

- Helps teachers design learning experiences that model authentic problems and processes practiced by scientists and engineers, to prepare students for future careers in science.
- Addresses diversity, equity and inclusion in ES, and shares resources and strategies for addressing racial equity in ES.
- Introduces facilitation techniques that redefine the teacher's traditional role as one that supports increased student agency, the development of critical thinking skills and an expanded awareness of their place in the global community.
- Includes a chapter that focuses on applying the principles and strategies shared in the book in an online learning environment.
- Addresses Next Generation Science Standards (NGSS) topics in environmental science and is aligned to the ISTE Standards for Educators. PBL is one of the best ways for students to explore

complex processes and concepts, and this book will help teachers leverage this approach to empower students to take action toward a better future and world.

Environmental Education in Context ,2009-01-01 This book presents an international perspective on environmental educational and specifically the influence that context has on this aspect of curriculum. The focus is on environmental education both formal and non formal and the factors that impact upon its effectiveness, particularly in non-Western and non-English-speaking contexts (i.e., outside the UK, USA, Australia, NZ, etc.).

A People's Curriculum for the Earth Bill Bigelow,Tim Swinehart,2014-11-14 A People's Curriculum for the Earth is a collection of articles, role plays, simulations, stories, poems, and graphics to help breathe life into teaching about the environmental crisis. The book features some of the best articles from Rethinking Schools magazine alongside classroom-friendly readings on climate change, energy, water, food, and pollution—as well as on people who are working to make things better. A People's Curriculum for the Earth has the breadth and depth of Rethinking Globalization: Teaching for Justice in an Unjust World, one of the most popular books we've published. At a time when it's becoming increasingly obvious that life on Earth is at risk, here is a resource that helps students see what's wrong and imagine solutions. Praise for A People's Curriculum for the Earth To really confront the climate crisis, we need to think differently, build differently, and teach differently. A People's Curriculum for the Earth is an educator's toolkit for our times. — Naomi Klein, author of *The Shock Doctrine* and *This Changes Everything: Capitalism vs. the Climate* This volume is a marvelous example of justice in ALL facets of our lives—civil, social, educational, economic, and yes, environmental. Bravo to the Rethinking Schools team for pulling this collection together and making us think more holistically about what we mean when we talk about justice. — Gloria Ladson-Billings, Kellner Family Chair in Urban Education, University of Wisconsin-Madison Bigelow and Swinehart have created a critical resource for today's young people about humanity's responsibility for the Earth. This book can engender the shift in perspective so needed at this point on the clock of the universe. — Gregory Smith, Professor of Education, Lewis & Clark College, co-author with David Sobel of *Place- and Community-based Education in Schools*

Resources for Teaching Middle School Science Smithsonian Institution,National Academy of Engineering,National Science Resources Center of the National Academy of Sciences,Institute of Medicine,1998-04-30 With age-appropriate, inquiry-centered curriculum materials and sound teaching practices, middle school science can capture the interest and energy of adolescent students and expand their understanding of the world around them. Resources for Teaching Middle School Science, developed by the National Science Resources Center (NSRC), is a valuable tool for identifying and selecting effective science curriculum materials that will engage students in grades 6 through 8. The volume describes more than 400 curriculum titles that are aligned with the National Science Education Standards. This completely new guide follows on the success of Resources for Teaching Elementary School Science, the first in the NSRC series of annotated guides to hands-on,

inquiry-centered curriculum materials and other resources for science teachers. The curriculum materials in the new guide are grouped in five chapters by scientific area—Physical Science, Life Science, Environmental Science, Earth and Space Science, and Multidisciplinary and Applied Science. They are also grouped by type—core materials, supplementary units, and science activity books. Each annotation of curriculum material includes a recommended grade level, a description of the activities involved and of what students can be expected to learn, a list of accompanying materials, a reading level, and ordering information. The curriculum materials included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the guide. The criteria reflect and incorporate goals and principles of the National Science Education Standards. The annotations designate the specific content standards on which these curriculum pieces focus. In addition to the curriculum chapters, the guide contains six chapters of diverse resources that are directly relevant to middle school science. Among these is a chapter on educational software and multimedia programs, chapters on books about science and teaching, directories and guides to science trade books, and periodicals for teachers and students. Another section features institutional resources. One chapter lists about 600 science centers, museums, and zoos where teachers can take middle school students for interactive science experiences. Another chapter describes nearly 140 professional associations and U.S. government agencies that offer resources and assistance. Authoritative, extensive, and thoroughly indexed—and the only guide of its kind—*Resources for Teaching Middle School Science* will be the most used book on the shelf for science teachers, school administrators, teacher trainers, science curriculum specialists, advocates of hands-on science teaching, and concerned parents.

Project Earth Science Paul D. Fullagar, Nancy W. West, 2011 One of the four-volume Project Earth Science series -- Introduction.

Big Data, Small Devices Donna Governor, Michael Bowen, Eric Brunsell, 2017 Now your students can transform their mobile phones and tablets into tools for learning about everything from weather to water quality. *Big Data, Small Devices* shows you how. This book is designed for Earth and environmental science teachers who want to help students tap into, organize, and deploy large data sets via their devices to investigate the world around them. Using the many available websites and free apps, students can learn to detect patterns among phenomena related to the atmosphere, biosphere, geosphere, hydrosphere, and seasons. Written by veteran teachers, *Big Data, Small Devices* is organized into two major parts. It covers tools that help you both find real-time data and understand what to do with the data. Then, the authors provide sample app-based activities that you can use as written or adapt to your specific needs. These days, opportunities to learn are as close as your students' personal technology. As the authors of *Big Data, Small Devices* note, Allowing students to conduct investigations using their smart phone in app-based activities allows them to be more engaged in science investigations.

Design, Selection, and Implementation of Instructional Materials for the Next Generation Science Standards

National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Board on Science Education, 2018-05-02 Instructional materials are a key means to achieving the goals of science education—an enterprise that yields unique and worthwhile benefits to individuals and society. As states and districts move forward with adoption and implementation of the Next Generation Science Standards (NGSS) or work on improving their instruction to align with A Framework for K–12 Science Education (the Framework), instructional materials that align with this new vision for science education have emerged as one of the key mechanisms for creating high-quality learning experiences for students. In response to the need for more coordination across the ongoing efforts to support the design and implementation of instructional materials for science education, the National Academies of Sciences, Engineering, and Medicine convened a public workshop in June 2017. The workshop focused on the development of instructional materials that reflect the principles of the Framework and the NGSS. This publication summarizes the presentations and discussions from the workshop.

Education Outreach and Public Engagement Erin Dolan, 2008-10-08 The purpose of this series is to provide resources related to teaching and career development for faculty at all stages of their careers and to scientists considering careers in industry. Young faculty (or graduate students and post docs thinking about going into academia) will find valuable information about how to design a course, how to find the right job, including academia and industry, and how to incorporate undergraduate research into their programs.
