Invariant Manifolds for Physical and Chemical Kinetics Alexander N. Gorban, Iliya V. Karlin, 2005-02-01 By bringing together various ideas and methods for extracting the slow manifolds, the authors show that it is possible to establish a more macroscopic description in nonequilibrium systems. The book treats slowness as stability. A unifying geometrical viewpoint of the thermodynamics of slow and fast motion enables the development of reduction techniques, both analytical and numerical. Examples considered in the book range from the Boltzmann kinetic equation and hydrodynamics to the Fokker-Planck equations of polymer dynamics and models of chemical kinetics describing oxidation reactions. Special chapters are devoted to model reduction in classical statistical dynamics, natural selection, and exact solutions for slow hydrodynamic manifolds. The book will be a major reference source for both theoretical and applied model reduction. Intended primarily as a postgraduate-level text in nonequilibrium kinetics and model reduction, it will also be valuable to PhD students and researchers in applied mathematics, physics and various fields of engineering.

The Making of History Irfan Habib, K. N. Panikkar, T. J. Byres, Utsa Patnaik, 2002 A Marxist scholar and historian, Irfan Habib has been a towering presence in the Indian intellectual scene for over four decades. His formidable intellectual reputation, established in the sixties with the publication of *The Agrarian System of Mughal India*, broadened as he became an authority in the entire area of Indian history from ancient to modern. Professor Habib's undiminished commitment to the cause of socialism is reflected in these highly original and bold analyses of Marxist historiography and theories of socialist construction. This volume comprises essays from scholars around the world representing the wide variety of Habib's interests and contributions. Ranging from history to politics and economics, the essays cover both the medieval period and modern India, as well as theories for the future of this emerging superpower. This special edition also features an essay by Irfan Habib, originally published as *The Economic History of Medieval India: A Survey*, covering the Delhi Sultanate, the Vijayanagara economy and the economy of Mughal India.

10th Conference on the Intersections of Particle and Nuclear Physics Marvin L. Marshak, 2010-01-11 CIPANP 2009 explores areas of common interest between nuclear physicists, high energy (particle) physicists and astrophysicists. These areas range from studies of the strong interactions that bind nuclei together to physics of the very early Universe and include such topics as neutrinos, hadron physics, spin physics, heavy ion physics, QCD and heavy flavor physics. The Conference papers include descriptions of searches for new physics, phenomena that cannot be accounted for by current

theories.

100 Years of Gravity and Accelerated Frames Jong-Ping Hsu, Dana Fine, 2005 This collection of papers presents ideas and problems arising over the past 100 years regarding classical and quantum gravity, gauge theories of gravity, and spacetime transformations of accelerated frames. Both Einstein's theory of gravity and the Yang-Mills theory are gauge invariant. The invariance principles in physics have transcended both kinetic and dynamic properties and are at the very heart of our understanding of the physical world. In this spirit, this book attempts to survey the development of various formulations for gravitational and Yang-Mills fields and spacetime transformations of accelerated frames, and to reveal their associated problems and limitations. The aim is to present some of the leading ideas and problems discussed by physicists and mathematicians. We highlight three aspects: formulations of gravity as a Yang-Mills field, first discussed by Utiyama; problems of gravitational theory, discussed by Feynman, Dyson and others; spacetime properties and the physics of fields and particles in accelerated frames of reference. These unfulfilled aspects of Einstein and Yang-Mills' profound thoughts present a great challenge to physicists and mathematicians in the 21st century.

100 Years Werner Heisenberg Dietrich Papenfuss, Dieter Lüst, Wolfgang P. Schleich, 2002-12-03 Over 40 renowned scientists from all around the world discuss the work and influence of Werner Heisenberg. The papers result from the symposium held by the Alexander von Humboldt-Stiftung on the occasion of the 100th anniversary of Heisenberg's birth, one of the most important physicists of the 20th century and cofounder of modern-day quantum mechanics. Taking atomic and laser physics as their starting point, the scientists illustrate the impact of Heisenberg's theories on astroparticle physics, high-energy physics and string theory right up to processing quantum information.
