*Hospital-Based Health Technology Assessment* Laura Sampietro-Colom, Janet Martin, 2017-01-23 A timely work describing how localized hospital-based health technology assessment (HB-HTA) complements general, 'arms-length' HTA agency efforts, and what has been the collective global impact of HB-HTA across the globe. While HB-HTA has gained significant momentum over the past few years, expertise in the field, and information on the operation and organization of HB-HTA, has been scattered. This book serves to bring this information together to inform those who are currently working in the field of HTA at the hospital, regional, national or global level. In addition, this book is intended for decision-makers and policy-makers with a stake in determining the uptake and decommissioning of new and established technologies in the hospital setting. HTA has traditionally been performed at the National/Regional level by HTA Agencies, typically linked to governments. Yet hospitals are the main entry door for most health technologies (HTs). Hospital decision-makers must undertake multiple high stakes investment and disinvestment decisions annually for innovative HTs, usually without

adequate information. Despite the existence of arms-length HTA Agencies, inadequate information is available to hospital decision-makers either because relevant HTA reports are not yet released at the time of entry of new technologies to the field, or because even when the report exists, the information contained is insufficient to clarify the contextualized informational needs of hospital decision makers. Therefore, there has recently been a rising trend toward hospital-based HTA units and programs. These units/programs complement the work of National/Regional HTA Agencies by providing the key and relevant evidence needed by hospital decision makers in their specific hospital context, and within required decision-making timelines. The emergence of HB-HTA is creating a comprehensive HTA ecosystem across health care levels, which creates better bridges for knowledge translation through relevance and timeliness.

Barber,1999-12-13 The HLA FactsBook presents up-to-date and comprehensive information on the HLA genes in a manner that is accessible to both beginner and expert alike. The focus of the book is on the polymorphic HLA genes (HLA-A, B, C, DP, DQ, and DR) that are typed for in clinical HLA laboratories. Each gene has a dedicated section in which individual entries describe the structure, functions, and population distribution of groups of related allotypes. Fourteen introductory chapters provide a beginner's guide to the basic structure, function, and genetics of the HLA genes, as well as to the nomenclature and methods used for HLA typing. This book will be an invaluable reference for researchers studying the human immune response, for clinicians and laboratory personnel involved in clinical and forensic HLA typing, and for human geneticists, population biologists, and evolutionary biologists interested in HLA genes as markers of human diversity. Introductory chapters provide good general overview of HLA field for novice immunologists and geneticists Up-to-date, complete listing of HLA alleles Invaluable reference resource for immunologists, geneticists, and cell biologists Combines both structural and functional information, which has never been compiled in a single reference book previously Serological specificity of allotypes Identity of material sequenced including ethnic origin Database accession numbers Population distribution Peptide binding specificities T cell epitopes Amino acid sequences of allotypes Key references

*Pressure Ulcer Risk Assessment and Prevention: Comparative Effectiveness* U. S. Department of Health and Human Services,Agency for Healthcare Research and Quality,2013-06-29 Pressure ulcers are defined by the National Pressure Ulcer

Advisory Panel (NPUAP) as “localized injury to the skin and/or underlying tissue usually over a bony prominence, as a result of pressure, or pressure in combination with shear and/or friction.” A number of risk factors are associated with increased risk of pressure ulcer development, including older age, black race, lower body weight, physical or cognitive impairment, poor nutritional status, incontinence, and specific medical comorbidities that affect circulation such as diabetes or peripheral vascular disease. Pressure ulcers are often associated with pain and can contribute to decreased function or lead to complications such as infection. In some cases, pressure ulcers may be difficult to successfully treat despite surgical and other invasive treatments. In the inpatient setting, pressure ulcers are associated with increased length of hospitalization and delayed return to function. In addition, the presence of pressure ulcers is associated with poorer general prognosis and may contribute to mortality risk. Recommended prevention strategies for pressure ulcers generally involve use of risk assessment tools to identify people at higher risk for developing ulcers in conjunction with interventions for preventing ulcers. A variety of diverse interventions are available for the prevention of pressure ulcers. Categories of preventive interventions include support surfaces (including mattresses, integrated bed systems, overlays, and cushions), repositioning, skin care (including lotions, dressings, and management of incontinence), and nutritional support. Each of these broad categories encompasses a variety of interventions. The purpose of this report is to review the comparative clinical utility and diagnostic accuracy of risk-assessment instruments for evaluating risk of pressure ulcers and to evaluate the benefits and harms of preventive interventions for pressure ulcers in different settings and patient populations. The following Key Questions are the focus of this report: KQ1. For adults in various settings, is the use of any risk-assessment tool effective in reducing the incidence or severity of pressure ulcers compared with other risk-assessment tools, clinical judgment alone, and/or usual care? KQ1a. Do the effectiveness and comparative effectiveness of risk-assessment tools differ according to setting? KeQ1b. Do the effectiveness and comparative effectiveness of risk-assessment tools differ according to patient characteristics and other known risk factors for pressure ulcers, such as nutritional status or incontinence? KQ2. How do various risk-assessment tools compare with one another in their ability to predict the incidence of pressure ulcers? KQ2a. Does the predictive validity of various risk-assessment tools differ according to setting? KQ2b. Does the predictive validity of various risk-assessment tools differ according to patient characteristics? KQ3. In patients at increased risk of developing pressure ulcers, what are the effectiveness and comparative effectiveness of preventive interventions in reducing the incidence or severity of pressure ulcers? KQ3a. Do the effectiveness and comparative effectiveness of preventive interventions differ according to risk level as determined by different risk-assessment methods and/or by particular risk factors? KQ3b. Do the effectiveness and comparative effectiveness of preventive interventions differ according to setting? KQ3c. Do the effectiveness and comparative effectiveness of preventive interventions differ according to patient characteristics? KQ4. What are the harms of interventions for the prevention of pressure ulcers? KQ4a. Do the harms of preventive interventions differ according to the

type of intervention? KQ4b. Do the harms of preventive interventions differ according to setting? KQ4c. Do the harms of preventive interventions differ according to patient characteristics?

**Wild Health** Cindy Engel, 2003-03 As Dr. Engel emphasizes in this enticing, well-referenced, [and] entertaining book (Science), we can learn a lot about human health by studying animal behavior in the wild. Indeed, some of the natural, holistic, and alternative human medicine being practiced today arose through the observation of wild animals. In this groundbreaking work, Dr. Engel points out fascinating parallels between animal and human medicine. She offers intriguing examples of how animals prevent and cure sickness and poisonings, heal open wounds, balance their diets, and regulate fertility. For instance, \*chimpanzees carefully eat bitter-tasting plant medicines that counter intestinal parasites \*elephants roam miles to find the clay they ingest to counter dietary toxins \*broken-legged chicks have been known to eat analgesic foods that alleviate pain. By observing wild health we may discover (or rediscover) ways to benefit our own health. As Craig Stotlz of the Washington Post noted, this highly readable assessment . . . triggers more outside-the-double-helix thoughts

about human health than anything I've read recently.

*Management of Psoriasis* Nikhil Yawalkar,2009 Treatments for psoriasis, besides affecting the skin, may be associated with various comorbidities (for instance, depression, psoriatic arthritis, Crohn's disease and, in severe psoriasis, metabolic syndrome and cardiovascular diseases), which often presents a therapeutic challenge to physicians. Written by renowned experts, this volume gives a comprehensive overview of psoriasis and its various comorbidities. It describes the treatment modalities for mild and moderate-to-severe psoriasis, including topical, phototherapeutic and conventional systemic treatments (e.g. acitretine, methotrexate and cyclosporine), as well as biological therapies (e.g. alefacept, efalizumab, etanercept, adalimumab and infliximab). The chapters on biological therapies focus on key safety issues. Further chapters focus on such topics as the management of childhood psoriasis and psoriasis in distinctive locations, such as the scalp, face, flexures, palm/soles and nails. Finally, future therapeutic modalities, with the focus on small molecules and potential biological therapies, are discussed. This publication will make significant reading to dermatologists and all physicians dealing with psoriasis, such as general practitioners, psychiatrists, rheumatologists, cardiologists and diabetologists.
