Sustainable Building Adaptation Sara J. Wilkinson, Hilde Remøy, Craig Langston, 2014-04-07 How to adapt existing building stock is a problem being addressed by local and state governments worldwide. In most developed countries we now spend more on building adaptation than on new construction and there is an urgent need for greater knowledge and awareness of what happens to commercial buildings over time. *Sustainable Building Adaptation: innovations in decision-making* is a significant contribution to understanding best practice in sustainable adaptations to existing commercial buildings by offering new knowledge-based theoretical and practical insights. Models used are grounded in results of case studies conducted within three collaborative construction project team settings in Australia and the Netherlands, and exemplars are drawn from the Americas, Asia, Japan, Korea and Europe to demonstrate the application of the knowledge more broadly. Results clearly demonstrate that the new models can assist with informed decision-making in adaptation that challenges some of the prevailing solutions based on empirical approaches and which do not accommodate the sustainability dimension. The emphasis is on demonstrating how the new knowledge can be applied by practitioners to deliver professionally relevant outcomes. The book offers guidance towards a balanced approach that incorporates sustainable and optimal approaches for effective management of sustainable adaptation of existing commercial buildings.

Collaborative Design Stephen A.R. Scrivener, Linden J. Ball, Andree Woodcock, 2012-12-06 Design occurs in a rich social context where the effectiveness and efficiency of social interaction and collective performance are key to successful outcomes. Increasingly, design is being explored and developed as a collective, collaborative, participatory, and even community process. The heightened recognition of designing as a social process has stimulated interest in collaborative design. This book contains the proceedings of the international conference CoDesigning 2000 held in Coventry, England, September 2000. During this meeting exponents from a wide range of design domains came together to present and discuss perspectives on and new knowledge and understanding of collaborative design, and the evidence for enhanced design

performance through collaboration. Within this volume different motivations for, conceptions of, and findings about collaborative design are addressed in 50 contributions by different research groups. Structured into 6 sections according to the main fields of interest, it provides a survey of the state of scientifically based knowledge and trends emerging from collaborative design research and their implications for a wide range of domains.

Corporate Real Estate Management Jan Gerard Hoendervanger, Theo van der Voordt, Jaap Wijnja, 2024-09-09 How can Corporate Real Estate managers and Facility managers translate an organisation's strategy into a real estate strategy that optimally aligns demand and supply, and adds value in a sustainable and socially responsible way? How to create a positive user experience, taking into account the diversity and dynamics of individual users' needs? How to balance different functional, experiential, architectural and technical requirements, budget, time, and legal preconditions? This book discusses Corporate Real Estate (CRE) and Corporate Real Estate Management (CREM) from the perspective of organisations, individual users, other stakeholders, and society. It presents theories, models and methods for analysing demand and supply and the best possible match. It discusses how to implement a CRE strategy by setting up project-based business cases, developing design briefs, and managing CRE interventions and CRE operations. Finally, it describes different options for the organisational design of CREM, sourcing strategies, required competencies, and future prospects. As such, the book covers the whole life cycle of corporate real estate. It integrates knowledge from different disciplines, including corporate real estate and facility management, environmental psychology, ergonomics, business administration, and many more. The authors have decades of experience in the field, as practitioners, teachers, and researchers. Jan Gerard Hoendervanger currently works as an independent CRE consultant. Theo van der Voordt is emeritus associate professor in Corporate Real Estate and Facility Management at the Faculty of Architecture, Delft University of Technology. Jaap Wijnja is lecturer and researcher at Hanze University of Applied Sciences, Institute of Facility Management.

The Indoor Environment Handbook Philomena Bluysen, 2009-12-01 Winner of the Choice Outstanding Academic Titles of 2010 award. Ensuring that buildings are healthy and comfortable for their occupants is a primary concern of all architects and building engineers. This highly practical handbook will help make that process more efficient and effective. It begins with a guide to how the human body and senses react to different indoor environmental conditions, together with basic information on the parameters of the indoor environment and problems that can occur. It then moves on to give a background to the development of the study and control of the indoor environment, examining the main considerations (including thermal, lighting, indoor air and sound-related aspects) for a healthy and comfortable indoor environment and discussing the drivers for change in the field. The final section presents a new approach towards health and comfort in the indoor environment, where meeting the wishes and demands of the occupants with a holistic strategy becomes the overriding priority. The book is filled with useful facts, figures and analysis, and practical methods that designers who are keen to

assess and improve the user experience of their buildings will find invaluable.
